Project: Customer Support Ticket Optimization System

1. Project Overview

The Customer Support Ticket Optimization System is designed to streamline the process of receiving, categorizing, assigning, and resolving customer support tickets. The goal is to reduce resolution time, improve agent productivity, and enhance customer satisfaction.

2. Business Objectives

- Reduce average ticket resolution time
- Improve ticket routing accuracy
- Increase agent efficiency
- Provide real-time visibility into ticket status
- Improve customer satisfaction scores

3. Scope

In Scope

- Ticket creation
- Ticket categorization
- Ticket assignment
- Ticket escalation
- Ticket resolution
- Reporting and dashboards

Out of Scope

- Chatbot automation
- Third-party integrations
- Mobile app support

4. Functional Requirements

- Users must be able to create new support tickets.
- System must categorize tickets based on issue type.
- System must assign tickets to the correct support agent.

- Agents must be able to update ticket status.
- System must allow escalation to higher-level agents.
- Dashboard must show KPIs such as: Total tickets, Open vs closed tickets, Average resolution time, and Agent performance.

5. Non-Functional Requirements

- Performance: System should load within 3 seconds.
- Security: Only authorized users can access ticket data.
- Usability: Interface must be simple and intuitive.
- Reliability: System uptime must be 99%.

6. Stakeholders

- Customer Support Agents
- Support Managers
- IT Team
- Customers

7. Assumptions

- All agents have access to the system.
- Ticket categories are predefined.

8. Constraints

- Limited development resources
- No external integrations in Phase 1

9. Success Metrics

- 20% reduction in resolution time
- 15% increase in agent productivity
- 10% improvement in customer satisfaction
